What is javascript ?

Ans. javascript is lightweight,interpreted,object oriented-language with first class function
And is best known as the scripting language for web page

. Primitives
  Primitives data types:
  1. String
  2. Number->
  3. Boolean
  4. Undefined
  5. Null
  6. Bigint

Undefined vs Null
 Undefined mean -> we declare the variable name but not assign value;
  Example. Var name;
        console.log(name) -return undifuned;
Null mean -> we declare the variable name and assing value null;
Example
      Var name=null;
  console.log(name) return null;

Types of
 It is used to check data of variable
Example   var I =67;
  console.log(types of I) return number;

This key
It is used refer to object
